

I am totally opposed to sending Broadband Over Power Lines (BPL), due to the obvious potential of severe RF interference to Amateur Radio frequencies. There are sufficient other means of Broadband transmission currently available for competition and accessibility on the market. ie: satellite, cable, DSL, IDSN, normal telephone lines, and others. I see this as lobbying by the power industry to the detriment of Amateur Radio and other services that would suffer from widespread interference if BPL was implemented. The potential for unacceptable interference has been vividly documented in filings by the American Radio Relay League, to which I concur.
